

To speed the production process, Jomark Graphics requests that your files be set up to the following guidelines and specifications:

Files may be supplied in any of the applications listed below. They may be either Macintosh or PC platform. CD, DVD and Zip (100MB or 250 MB) are acceptable. File upload via our secure ftp site is also available at www.jomarkgraphics.com.

Current applications include:

Adobe Photoshop CorelDraw
Adobe Illustrator PowerPoint
Adobe InDesign Macromedia Freehand
Quark Express 4-7.0

Other applications are available. Call us with any questions.

Adobe Photoshop

Files should be layered psd , flattened TIFF or EPS in RGB (Greyscale for B&W output). If you are supplying scans for final output, please discuss with our art department as most display graphics require much larger files than page and brochure graphics. The ideal resolution would be no less than 100 dpi @ final output size.

Adobe Illustrator

Files should be set up at full size or proportional to final output size, Include a hard copy (color layout if possible). Include all placed images as TIFF or EPS along with your file. Please convert all text to outlines. It is also helpful to include your original file, in case any changes have to be made.

Quark Xpress / Adobe InDesign

Files should be set up proportional to final output size. If possible, do not include text as “placed” eps files. Use original text boxes. Do not style fonts in Quark. Only original font weights are acceptable. Please do not link JPGs or PDFs in Quark. Do not forget to collect all necessary links including EPS/TIFF images, logos and fonts.

Color

Please supply necessary PMS colors or samples for color matching.

Please feel free to contact our art department or your sales rep with any questions. **We have a wide range of capabilities that can be tailored to your workflow**
